Price drop predicted **for 3033s**

themselves for a drop in the residual values of IBM 3033 machines

3081 family.

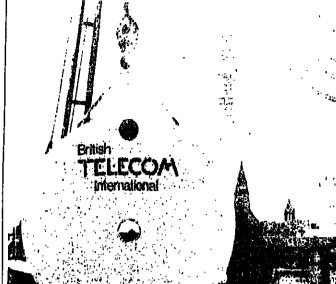

Speculation about the demise o the 3033 has forced prices down over several months, but there has been no significant price shift recently, despite widespread expectations of replacement machines from the 3081 series. IBM last week backed off from making its next announcements. These are expected to be a five million instructions per second (mips) processor and a seven mips machine. A decition on the launch is still immi-

According to Vernon Etherington, managing director of Combro Computer Brokers, an eight-mega-byte 3033U with 12 channels currently fetching a market price of £550,000 will only sell for around £450,000 by the end of the year.

But this is a symptom of normal supply and demand factors rather than speculation on 3081 announcements, he adds.

Logan White, managing director of Megaleasing, predicts that the entire 3033 range of three machines, the S, and U, will be obsoleted by the end of the current IBM quarterly announcement cycle. They will be replaced by 3081 machines with corresponding power ratings of 3.5, five and seven million instructions per

Distributed processing blow to ICL

by David Craver

THE Camelot project to automate DHSS supplementary and inca-pacity benefits with 26 ICL main-frames spread across the country, is dead. A consultant's report recommending that the plan be scrapped is sitting on the desk of pister Norman Fowler, and it is

MBS Rentals

Windsor (07535) 55211

ICL are cancelled. A new scheme, the Local Office Automatic Dava Processing Proicct, or LOP, is awaiting approval

and is almost certain to go to open the for the machines involved. The loss of Camelot business will come as a heavy blow to ICL, but there is bound to be strong political pressure to ensure ICL has a hand in LOP.

The Department of Health and Social Security's Camelot project was to spread ICL 2950s over its 12 regions, with each local welfare office equipped with a dumb ter-minal linked to a central data-

tion of the project, and found serious problems with the online

velopment work has now stopped.
The contract for LOP is planned to be placed by 1984, with equipment delivered in 1985 and live installation by 1986. A full study on how to proceed with computerisation is to be done between now and September, if Fowler gives approval, with technical require-

called the "whole person concept", by which a single claim made at a single location will pro-vide all benefits to which an individual is entitled. As such it will be an expansion of the Camelot scheme, although it will be more generalised and less benefit expli-

LOP will involve eight to 12 computer centres linked by VDUs to local benefit offices, with an expected response time of five seconds. The terminals are likely to be intelligent, micro-based units with lots of concentrators.

Failure to train will cause DP salary boom, survey finds

y Andrew Thomas

shortages are getting worse.

Thursday, April 8, 1982

STAFF shortnges in the average mainframe installation last year left significant gaps in the main job categories. A national survey published exclusively in Computer Weekly this week reveals that the average site had 6% fewer systems analysts than it needed, 8% fewer programmers and 11% fewer ana-

The survey also shows that the average pay rise received by DP employees last year was below 10%, and that perks are playing an ever-increasing part in staff remu-

by 9.5% in 1981, but are predicted by managers to increase by 7.5% this year. Chief analyst/programmers topped the table of 1981 increases with an 11% rise, and are

PRICING and delivery on IBM's latest additions to its 308X top-end same price/performance curve as a control of the same price/performa same price/performance curve as the 3081D, a 3083J gives fewer mips per £ than a 3081K, indicating that the machine is relatively

overpriced at the moment.
"There is a lot of fat in the price of the 3083J which could come out before IBM is ready to make delivery," says Brian Burch, director of large systems marketing at National Advanced Systems.

IBM expects to start delivering the low-end 3083E in late 1983. This model can have eight or 16 Mbytes of memory and eight or 16 channels. It is also ultimately upgradeable to the 3081K.

Smaller versions of the 3083 Models B and J are also upgradeable. These processors are fully rated at six and eight mips respectively and can have up to 24 input/output channels and 32 Mbytes of main store - the same as the 3081 series processors. Smaller versions, say with 16 channels and 16 Mbytes of memory, will not be available until 1984.
Initial deliveries of larger 3083s

should start in the final quarter of

According to Burch, IBM is attempting to prevent a lot of low-end 3033s from coming on the market at low prices, under the £600,000 price tag which the independent leasing companies put on a 3033 at the moment. Although IBM is no longer building 3033s it is estimated that up to 40% of the 2,500 machines made since the launch in 1977 are leased from launch in 1977 are leased from

Multi-airline booking service

ACCESS to the central booking systems of most major airlines is now possible through a single operating system for many small

travel agents.

This follows five years of cooperation between the airlines and Ascot-based Travicom, which has Ascot-based Travicom, which has offered a system to all travel agents approved by ABTA, the Association of British Travel Agents, for an annual fee of £1,700.

Until now Travicom has produced systems just for business bookings and large travel agents approved by IATA, the International Air Transport Association.

Other travel agents have had to cope with the different operating systems and protocols of the various airlines, which are constantly changing anyway. Now that is Travicom's headache.

The booking system is not designed for end users, but for operators skilled in the existing airline jargon. "We decided not to offer user friendly commands because most agents have trained cause most agents have trained staff to use the terminal," explains Travicom managing director Eric

There is a demand for an in-house booking system with simple commands for some larger com-

panies, but Jarvis adds that the politics involved prevent this from being offered at the moment. "The big travel agents do not wish to lose their business," he says. At the same time, the big airlines want to keep their business with

approved operators.

The system is based on the Apollo desk-top computer and has word processing and mail list packages as well as the Tabs accounting service as options.

Prestel is also available, and access to the private the private by

Control Data pushes interface as standard

by Jon Whiteley
CONTROL Data Corp has started what could be a long drawn out campaign to get its Intelligent Standard Interface (ISI) adopted to the largest independent indep what could be a long drawn out campaign to get its Intelligent Standard Interface (ISI) adopted as a standard by the computer peripherals industry.
The ISI is a microprocessor-

controlled box which could in theory match any peripheral with a

Olivetti DP profits up

THE parent company of Olivetti data processing and office equipment increased its profits by a sharp 75% in 1981 to 87.8 billion Italian lira (approx £68 million) compared to the previous year. Turnover rose 23.5% to L1,362 billion.

Turnover of the whole Olivetti group rose 32.4% to L2,887 bil-

be the largest independent (non-IBM) computer peripherals manufacturer in the world, but flourishing new technologies, particularly in disc drives, have provided opportunities for small companies to begin to challenge collectively its might. This interface proposal is part of Control Data's response.

ISI is at present a proposed architecture which specifies the protocol and the physical interface. Control Data has supplied details of the ISI to Ansi (the American National Standards American National Standards

There already exists an Ansi standard interface, the X3T9/1226, which is 8-bit parallel and non-intelligent. In addition it

It is of a much more limited specification than the ISI but it is as yet not widely adopted, so this could not be a stumbling block to

Grover Mullin, manager of OEM marketing at Control Data in Minneapolis, US, considers that the ISI is a much broader concept than Shugart Associates recently announced SASI interface. As a demonstration of this, Control Data is considering making SASI a subset of ISI.
ISI would allow the OEM peri-

ICL is to be coaxed into providing a better service to independent oftware houses. The campaign will be led by the Software Products Committee of the Computing Services Association, according to its latest recruit, John

Garrick, a director of Telecomputing with responsibility for the design of the company's best-selling TPS ICL teleprocessing nonitor, has been invited to join the committee and participate in negotiations relating to ICL's licy towards CSA members.

ICL needs to get together with software houses and bury the atchet," commented Garrick. We want to take advantage of

He intends to suggest that there is a need for a more receptive envionment within ICL for enquiries from independent software nouses. "You can get information really in the business of selling tin and specifications out of them, but so we would need something difyou have to know exactly what you want. There is no facility for "Is there anything like this?", he ex-

1973, Garrick considers that ICL equipment is much more difficult to get to know than IBM's. He cites as an example the lack of an assembler-type language on ICL 2960 installations.

Commenting on ICL's Trader Point scheme, under which it joins forces with distributors, systems their new style and bring pressure and software houses and bureaux to bear so that promises can be to market small systems, he said:

"This seems to have been carefully worked out to appear attractive to the third parties, and to have also considered the practical problems

He added that Telecomputing i "looking with interest" at Perq ICL's engineering graphics workstation, which he considers has an opening for applications

tee, Garrick said that the CSA was anxious to play a more active role in seeing that money allocated by the Department of Industry is used for genuine software development, and not for redevelop-

Voice storage market set to soar

MULLIN . . . Hardware solution to a growing software problem.

by Donald Kennett

SYSTEMS for digitising and storing voice messages will have a \$500 million market in the US by 1985, according to the Yankee Group market research company, despite the fact that currently installed systems are unpopular.

The European market overall for voice mail will show slower growth because many PTTs regard such services as falling under their monopolies and will insist on providing them themselves on a On the wider aspects of the role

Yankee Group analyst Karmen Guevara said at a recent seminar that significant improvements such as much cheaper mass storage, better quality voice recording and better user commands were needed before the systems were widely used.

Storage costs are high because of the complexity of the human voice, which requires about

It would also be impossible to sell systems on the basis of their greatest potential benefit which was to managerial productivity. This was too difficult to quantify.

It is therefore necessary to sell systems on the basis of savings in telephone costs arising from the fact that fewer unsuccessful calls should be made and calls should be

Companies should identify specific application areas, for example where frequent uni-directional calls are made between the same groups and voice commu-nications predominate, and the

Other suppliers include Delphi, IBM and Voice & Data in the US, and OTL in the UK, but Guevan predicts that by he end of nen year there will be 14 or more, in cluding PABX manufacturers Mittel, Rolm, Intecom, and Norther Telecom. Datapoint will ha

David Craver visited the exhibition of computer-aided design systems which was held at Brighton last week

There was a heavy turnout of exhibitors and visitors, with most of the main contenders in the CAD battle present in force. IBM was a feetile present in feetile present in force. IBM was a feetile present in feetile pre Emphasis shifts to smaller systems Savings at the manufacturing end

THE shift from big turnkey systems towards smaller systems for smaller users was widely apparent at last week's CAD82 exhibition. As the cost of 32-bit developments in CAD was Konga systems continues to drop, the accessibility of powerful computers accessibility of accessibility of powerful computers accessibility of accessibility

UK not seizing opportunities CAD offers, says Minister

they are not a solution to all the UK's economic ills, industry will only remain competitive if de-signers are given the best available ools for their work.

This was the message of Information Technology Minister Kenneth Baker as he opened the CAD exhibition in Brighton last week. He forecast a world market for CAD/CAM tools of some £100 million annually in five years, with the UK market about one tenth of

notable exception.

Erik Arnold, a Fellow of the University of Sussex who has been studying the CAD/CAM market,

said in a conference report that most users of the new technology are still in the experimental stage.

Arnold has been doing research with senior fellow Peter Senker for the Engineering Industry Training Board to assist it in planning future requirements. Most instalfuture requirements. Most installations use manpower savings as a cost justification before buying systems, he found, although there does not tend to be much effect on manning levels in the experimental

From 60% to 65% of UK CAD installations have hardware and software of US origin, with the figure by value probably much greater since those using UK ler, Arnold said. While the U companies tend towards broad, all purpose equipment, he pointed to UK strength in solid/surface modelling, printed circuit board design, and process design.

In the long term CAD could cause serious job losses, and the

and enough to the manufacturing side of CAD/CAM was made by a number of exhibitors at CAD82 in Brighton last week.

But it is at the manufacturing end that the real savings can be made, says Keith Trickett, managing director of Compeda. Compeda announced last week the first production version of its Integrated Design, Engineering and Manufacturing System, Idems, which manages projects from design to manufacture.

Idems, like Compeda's other

anded engineering, is hardware independent. It is built around a control of atabase, which can link the various aspects of design, analysis, and manufacturing of Compeda which is wholly-owned by the National Research Development Group (now British plant design systems the company is "a worldbeater".

Trickett, touting the UK origins of Compeda which is wholly-owned by the National Research plant design systems the company is "a worldbeater".

Technology Group), said that in plant design systems the company is "a worldbeater".

He was referring to the Plant which is going particularly well in Petr microcomputer.

£100,000 budget for your next computer? Make sure you check MOMENTUM

£100K may be your total budget, or that may be just for starters. Either way, it's a lot of money. To get the best out of that money, you'll add on-line terminals. And the more successful you are, the more terminals you'll add.

Be careful. As you grow, your organisation becomes more and more dependent on the computer. That's why you need . . .

MOMENTUM!

Why? Because MOMENTUM systems are resilient to failure. Hardware and software failures reduce to just a hiccup for the users. And you can add resilience features as you need to, add MOMENTUM as you grow. No one else offers anything like it!

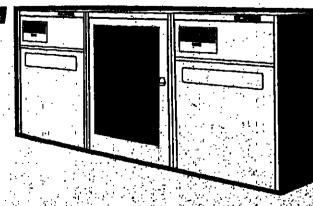

But that's just the end of the story. For a start, MOMENTUM computers offer hardware and software

ideally suited to high-performance on-line transaction processing. Superb systems software and a full range of applications packages. Systems handling 150 or more full-duplex conversational terminals. A communications architecture unsurpassed for handling multiple lines, multiple standards, multiple protocols.

And full support from a profitable, growing British computer manufacturer. So whether your budget is £50,000 or £500,000 get the facts. Post the coupon. Now.

Software house enters the Japanese market

JAPANESE sales worth over 20,000 in the first year have been predicted for Compact Accounting's software, by the company's new Tokyo agent, Yaskawa

An initial exclusive agency agreement has been signed between the two companies, fol-lowing the recent Information Technology Exhibition held in To-kyo, where Compact Accounting demonstrated its CP/M based

range of accounting packages.
The product which aroused the most Japanese interest, however, was Compact's powerful program generator, Nucleus, which has a built-in, fast file access ISAM fa-

keting director David Parsons, the new Tokyo agent, which is part of the Yaskawa Electric Group, is to sell software to other manufactur ers such as Hitachi, Toshiba and NEC for turnkey packages.

We want to tackle the 8-bit and 16-bit machines at source, and get in through the back door," ex-

tralia, the US and Singapore, on a growing variety of equipment with versions running under CP/M and Unix operating systems. It is also to be implemented on the ACT Sirius I 16-bit microcom-puter as soon as Microsoft's Basic

86 compiler is released.

Marketing the Sirius package, which includes Compact's software, is systems house Zenithplan, formed just four months ago to sel Sirius equipment. Despite its recent entry into the marketplace and the fact that it has been selling for only six weeks, the company has managed to sell 12 systems.

Zenithplan says that Compact's accounting, stock control, order processing and payroll packages were chosen because they were tried and tested.

"About 60% of first-time use have a bad experience, and we aim to use our background in running companies to avoid that," com-mented Bruce Wilden, managing director of Zenithplan.

Telecoms | Tandy will contract

THE contract to recommend the government's internal telecomnunications strategy for the next 10 years has gone to office systems consultancy Eosys (for-merly Urwick Nexos) and software house F International.

The two companies were one of three teams appointed last Notion reports for the strategy and is sold in the UK by Leeds-

The study is to be submitted to the Central Computer and Telecommunications Agency by the end of the year. It is to cover the voice, data and office systems telecommunications requirements of 500 government offices throughout the UK. They are currently linked by a network of leased lines.

Directors of Bosys recently bought their firm out of the government-backed Nexos office systems company when it col-lapsed. They are David Firnberg, Maryanne Chandor, Diana Duggan and Gordon Dean.

Chairman is Sir Anthony Burney, once an ICL director.

COMPUTER WEEKLY'S SOFTWARE

SUPPLEMENT

Computer Weekly was the first general computer journal to give software its own space when Software File was introduced for weekly news reports, Now the time has come to expand the coverage further.

Edited by our Software Editor Claire Gooding, Software Month will devote its whole coverage to one subject each month. The topics are listed below.

subject each month. I he topics are listed below.
But included each month will be a news round-up, highlighting important events of the past month, and a column by consultant David Ferris on the increasingly important business side of software and the companies which market it.

PROGRAMME FOR 1982

September 9: Program productivity - program genera-tors and high-level languages

November 4: City software Decamber 2: CAD/CAM and scientific software

For advertising within Software Month contact Gordon Bradley, 01-661 3126.

CRIMP

THE seemingly easy market for doctors' systems may turn out tougher than expected.

Apple Computer, has agreed to participate by allowing 50 dealers of the supply medical software free to a supply medical softw

ocean at the moment, but publicity from the plethora of recently launched free magazines for GPs and free information services is bound to generate support. This will mean commercial companies will have to raise the level of their competition and lower their prices to stay in business, possibly by using cheaper hardware.

One company which anticipated the swing in the market is British Medical Data Systems, which has brought out "the Cortina equivalent of our Volvo GP60 system", according to John Wells, sales and

The GP20, which has the capability for up to 20,000 patient records, has been developed for the Z80A chip-based Cifer microcomputer, manufactured by Wiltshire-based Cifer Systems.

"In 1979 we started developing the GP60 system for Alpha Micro machines, then decided about a criptions, and chronic illness mo-nitoring, has so far been limited. BMDS. "We waited for British Only one hardware company, hardware, a reliable operating

"We have opted for a single-user

micro system because we didn't This might be a drop in the ocean at the moment, but publicity support," confirmed Wells.

Costs of the system are dramasystem, which starts at £10,000. Prices for the GP20 are variable according to the amount of memory and software modules required, with the basic Repeat Prescription Software using a two-400 Kbyte floppy disc system selling for £3,950 exclusive of VAT.

Further options include word processing facilities and selection modules to analyse statistics for such bodies as the Family Practitioner Committees. As the operating system used is CP/M, the standard for 8-bit micros, the GP would also have a wealth of financial packages available to complete a surgery management system.

Wells considers that computerisation offers the GP more benefits than are immediately obvious.

"Installing a computer acts as a catalyst for a complete review of the medical system operating in group practices," he said. "Com-piling the drugs list for the repeat prescription system reveals great variations in prescribing habits."

Wells . . . "We have the Cortina equivalent of our Volvo GP60 system."

DG boost for information system languages

ductivity than with the soul of its Belipse machine, Data General has announced a series of language enhancements and productivity aids for the 16- and 32-bit information systems.

The licence fee for AOS/VS APL is currently £9,684.40, in-cluding installation, training, 90-day warranty and subscription update service. Users who have the Software Subscription Ser-vice (SSS) will receive new versions of the software free.

New image for the milkman

THE challenge of a weekly row with the milkman could disappear from our lives if dairies adopt a system developed by C. M. Computer Systems of Wiltshire. In addition to office accounting procedures, it also creates a detailed roundsman's book complete with customer receipts.
"We believe it will go

towards eliminating doorstep disputes between milkman and housewife, which are so often the result of inadequate or illegible recording methods," said Chris Wright, managing director of C.
M. Computer Systems.
A weekly rounds book is created

for each deliveryman showing cus-tomers' names and addresses, with details of the amount and type of goods to be delivered. The system will cater for groceries delivered by the milkman as well as dairy products, and will also record competition and Christmas Club contri-

Any alterations to existing in-formation are written into the book by the milkman during his round, then fed into the system on

his ceturn to the dairy. C. M. Computer Systems claims that it is possible to combine stock and sales information to balance

Information on 1,500 delegates CITY-BASED consultants

Electronic Office Services has launched a conference accounting and administration turnkey pack-age which it claims is half the price of its nearest rival.

Costing £1,375 plus VAT,Conference Controller can store information on up to 1,500 delegates and runs on Apple microcomputers. Versions for Sirius and IBM hardware will follow shortly.

Booting routines

AUTOMATIC program booling routines are included in the Utility package for Superbrains, developed by Slough-based KGB Micros, Designed to speed apply cation development on any system based on the Z80 chip or on in Apple or Pet with a softcard, Unit ity costs £57.50 by mail order.

Planning package

POPULAR financial planning package Micromodeller is down available for use on Southwest Technical Products (Computers) S/09 small business computer. There is currently a version for machines with the rier operating system. One for Unifies will be offered shortly.

COMPANY NEWS

IN a bid to break the back of two of the worst obstacles to small businesses start-ups in the computer industry, the Irish government launched, four years ago, a unique cash and tax incentive package for computer entrepreneurs.

It is a start-up scheme pays launched, four years ago, a unique cash and tax incentive package for computer entrepreneurs.

In summary, the government will give an EDP (electronic data will give an EDP (electronic data will give an EDP) (electronic data w

processing) start-up company a basket of loans and grants equal to "Fortunately for us, not only did the companies approached confirm the kind of market pro-£9 for every £1 put up by the entrepreneur, with an interest subsidy on the borrowings, and no tax on the dividends.

The scheme, initiated in 1978, has been little publicised outside Ireland to date, but its success so

Pirstly, the average cost to the UK government of setting up a new job is reckoned to be around £25,000.

The enterprise development

scheme, as it is called, has been used to start 103 projects so far, at a gross cost to the Irish govern-ment of £43.2 million, in exchange for 4,250 jobs. That, for those whose arithmetic is slow, is less than £10,000 per job created

Secondly, the appraisal techniques of the IDA appear to be very successful in relation to the choice of projects backed. Cyril Kerr, the manager of Da-tac, which manufactures data cap-

tac, which manufactures data cap-ture and monitoring equipment for use by large communications and power utilities, puts it like this: "Without the specific aid provided by the scheme, I might still be with my old company."

Kerr has so far put up £40,000

of his own money, which has been matched to date by £80,000 in guaranteed loans, and £70,000 in

grants.
According to Kerr, the project, which he put to the IDA in November 1981 and which was ap-proved by March 1982, was carefully looked at by the IDA as-sessors. "In the business plan, which ran to 80 pages, I proposed to manufacture the equipment un-der licence from a German company. The IDA looked at our market projections, and were able to go to some of the customers we identified and ask them if there

pany's original operating software using his own staff, and has started to export back to the licensing

Most of Kerr's principal componentry, including printed circuit boards, comes from Ireland. This cuts down imports, creates peripheral employment and reduces Ireland's foreign exchange prob-

The speed at which Kerr has taken on staff at his first-floor factory, sited close to the centre of Dublin in a rebuilt warehouse re-

Up till now, most of his customers have been Irish state cor-

porations and utilities, such as the Electricity Supply Board and the railway company CIE. This has given him an excellent home cusrency import payments. But is has not enabled Kerr to make his divi-

miniscent of some of London's dockside development, is also interesting.

Ed MacDonald, the IDA manager responsible for the project, insists that the scheme is primarily for enough money in the beginning dockside development, is also interesting.

For a set government investment of £70,000, he has created 13 jobs, at a unit cost of about £5,500, or a gross cost of £11,000 if the losse set token interest to the project, insists that the scheme is primarily intended to tap entrepreneural akills which are hidden in corporate managers in Ireland, but the IDA has created there is considerable scope for the project, insists that the scheme is primarily for enough money in the beginning and most UK entrepreneurs don't have the nerve to say what's really required. But the IDA has created there is considerable scope for the project, insists that the scheme is primarily and most UK entrepreneurs don't have the nerve to say what's really required. But the IDA has created a formula that meets the real mid-

> abroad, particularly America. Noticeably, none of the IDA of bank involvement requires the en-trepreneur to part with any of his equity, or to create second o subsequent mortgages on his

The two curses of the UK entre-preneur are lack of cash and taxa-tion. The Irish government scheme addresses those two problems head-on, and seems to have artived at an unusually good form of the "I'm OK, You're OK"

And by offering tax-free divi-dends in return for exports the government eases its foreign exchange borrowing requirement which is currently far too high.

The UK, on the other hand, i burdened by a somewhat blin bureaucracy, which overlooks no only the activities of its Irish neighbours and rivals, but the low tax environment of the Victorian era which created so much of British industry.

The UK also suffers from number of financial institution which are trying to act like Ameri can venture capital institutions without having taken detailed ac count of the environmental of ferences between the UK and the US. One consequence of this that the percentage equity stake an entrepreneur is required to part with in the UK in order to get some cash, is high. Small com-panies are currently being asked to part with an average of 40% of their shares in return for sums of

overseas participation. Licences to manufacture have often come from proaching the IDA with the

£250,000 needed to start a company, could realistically hope to raise £2.5 million to get into the

by Kevin Cahill

international marketplace.

However, both the IDA and UK financial institutions suffer from one obsession. Both groups of financiers seem determined to scour America for licences and patents to goods in the UK (and Ireland). The facts of the matter are that many US patents or manufacturing processes, particularly in the computer industry, originated

It would be much more appropriate if the government and UK financial bodies got their act together as the IDA has.

companies raise funds for development and expansion Blectronics Weekly, sister paper to Computer Weekly, is running a special conference on May 25.

Relieved to be the Computer of the Comput Believed to be the first of its kind in the electronics industry, the conference will be a one-day event and is being jointly spon-sored by Electronics Weekly and the Midland Bank.

The aim is to bring together small and medium-sized electronics companies and some of the best sources of finance in the UK.

The conference will be chaired by George Gilhespy, a general manager from the Midland Bank's corporate finance departme he will be supported by Colin Amies, a director of corporate finance at the Midland and a former electronics company executive.

Other speakers at the conference include Peter Minton, the electronics industry analyst from stockbrokers Laing and Cruik-shank, and Geoff Taylor, manag-ing director of TDC, the venture capital arm of the Industrial and

Commercial Finance Corporation.
According to Mick Elliott, the editor of Electronics Weekly, the primary sim of the conference is to bring together financiers willing to put up money for electronics companies, and companies, particularly small and medium-sized

Fundamental principles of Infotecture

ecture"

There are some fundamental principles of infotecture. And believe these principles are useful in practice — in fact, they are taken from my own practical work

I will list the first set of prindid you book" or "Where are you going on to" may be necessary to identify positively the correct record.

apply to the system in question.

2. Goals should be stated so that they are as objectively interpreta-

We should clearly separate the specification of the two basic goal types: Attributes (qualities or re-sources which can be measured on a scale) and Functions (required things, which are measurable by presence or absence).

4. Techniques are the optional methods, products, ideas, and structures which we design into the system exclusively for the purpose of meeting one or more attri-

'INFOTECTURE' is derived 5. A single technique will infrom a French word. I take it to evitably affect several critical attributes of the system at once. Some of these effects will be planned and desirable. Some effects, however, will be unplanned and will be un-

6. We must, therefore, emphasise the art of controlling all attributes of the techniques we use. This art must include collecting experience on effects of techniques, methods for estimating the cumulative ffects of a series of techniques in a single system, and the art of practimeasurement of the multiple effects of a set of techniques.
7. It will usually pay off to discover

weaknesses in your proposed design technique set at the earliest possible point in time. The art of systems architecture is so complicated that we must be

able to analyse the design status, relative to our design goals, from levels, many conceptual points of view, and at many points in time during development,

9. A theoretical analysis of the attributes of any set of design techniques must be supplemented by

IBM - lesson in

upgrading

THERE is good news and bad news in IBM's additions to its 308X family (the H series). The good news is that the 3083 models provide a gradual upgrade path to the top performance 3081 machines; the bad news comes from confirmation that to migrate from the 3033 to the 308X means using three operating systems.

The announcement of the 3083 makes it clear that the first machine in the H series, the 3081D launched in November 1980, was more of a strategic move than an actual

At the time it was felt that the 3081D was not a true H series machine, but rather a degraded version of one. That was confirmed with the launch of the 3081K, with a 40% improvement in performance, in November 1981. It was underlined by the launch of the 3083 series last week, for those new machines can be field upgraded to a 3081K but

So where does this leave the 3081D user? Well, just as all roads lead to Rome, all upgrade paths lead to the 3081K, which is for the time being the most powerful machine IBM

But for the old machine user still considering where to go next, it leaves a very clear direction. Avoid the 3081D.

An examination of the price/performance curve for the new 3083 machines illustrates why. The largest one offers only marginally fewer bangs for similarly marginal fewer bucks than the 3081D - the actual numbers are about two million instructions per second less for a \$750,000 price cut. Yet it upgrades smoothly to the largest of IBM's systems,

The real significance of the 3083 is that users of a small 303X or a large 370 series processor need not now jump to the 10-mips 3081D unless they actually need that level of performance now.

The other important thing about the 3083 announcements is that IBM-has at last acknowledged that 303X users wishing to run existing software on the new processors and to take advantage of the improvements made in Extended Architecture - will need three operating systems. They must have MVS/370 for existing software, MVS/XA as the true operating system for the 308X range, and VM/XA so that the other two can be supported on the same machine - and that is really going to cost.

What IBM now has to do is sort out the tangle of operating systems to reduce machine overheads and cut that cost.

Has ICL changed

IN the past, ICL's overtures of friendship have been treated with the same suspicion as the spider's invitation to the fly.

"What's in it for us?" has been the first question to spring to the lips of dealers and traders in response to the company's Trader Point scheme, set up to encourage independent distribution channels.

The answer, according to ICL managing director Robb Wilmot, is mutual benefit. Dealers will be fired with enthusiasm by the new Trailer Point scheme, which gives them wider profit margins the more they sell, and buyers will be by ICL's complete and integrated range of "solutions" (or products, as they used to be called). The result: more systems sold, which is lovely for everyone.

So what will ICL have to offer which will lead buyers in its parlour rather than anyone else's? A complete range, says Wilmot: Perq, the DRS distributed system, the System 25, and at the top the ME29.

He has already committed himself to cutting prices, and then cutting again. If he can do that, if he can reverse history and fire up his third party dealers and distributors, and if he can ensure the software support from those outside software houses is up to scratch, then ICL can come up with. substantial profits from that range.

It will take nerve for the newly converted company to

1984 and all that . . . I

THIS week's example of the strange things people say about computers was sent in by Norman Hilton, of High Barnet, Herts, who wins £5.

One reason for American anxiety is the rise of what is called the expert system. This means that the brains and lifelong experlence of many kinds of experts, doctors, geologists, accountants and so forth, can be put into a computer programme and used at any time, anywhere, by the public.

" The Standard

LETTERS

Wrong people promoted

on management in the computer industry by Alan Williams (Salesbit, CW, March 18 and 25). I feel the main reason for bad management in the industry has come about because introverted technicians have been forced unwillingly, by a desire for financial progression, into management.
Once in that position, it soon

becomes apparent that they really have no desire, or interest, in communicating or in other people's problems. Their only interest lies protecting their own rear ends. Invariably a new manager of this type has been appointed by an equally incompetent person, who would never concede that a mistake had been made, and the chain is perpetuated to the detriment of the whole department.

When the incompetent manager realises that he can successful pull the wool over department eyes and get away with it, he will move on to new pastures - to the salvation of the present company.

Good managers evolve through a combination of innate ability and experience. No amount of instant courses, buzzwords or pinstripe suits produces the desired result. Managers must make decisions which they may, in retrospect, find to be incorrect and corrective action may have to be taken, but this is far better than an indecisive manager who is afraid to make any

Managers should be appointed from within a company from people who have potential, and not necessarily long service. Employing from outside can saddle a company with an incompetent whose employer is only too willing to re-lease him with the best possible references. Technicians should be paid a salary which reflects their true worth so that they may keep on doing the job to which they are best suited and not be forced up to their level of incompetence.

Bottom-up design for Sage

DONALD Michie performed a UK, Sage was designed "from the March 25) in setting straight the pricing record vis-a-vis Sage (an Difference SPL expert system) and AL/X (the ITL expert system). Other confusions in the press recently (not Computer Weekly) have included the report that Sage was applied to oilrig problems, in fact an experimental AL/X application begun several years ago. Sage will be available in May, 1982.

I also wish to clarify the relation

between the AL/X and Sage packages. Both are based on Prospector ferencing methods. But while the AL/X package has served very well as a research tool and introduction to expert systems in the

useful service (Letters, CW, bottom up" for regular non-re-

a) Expertise modularity (a post-Prospector development, valuable for large-scale systems);
b) Logical consistency checking during use (uniquely); c) Efficient test facilities; d) Other language design, and (a observed) arithmetic.

In an area moving so rapidly, is perhaps inevitable that succonfusions arise.

JON YOUNG Head of Expert Systems Group

Flogging a dead horse

A CERTAIN manager, being away from his computer room, re-ceived a call from his frustrated supervisor, reporting a mysterious hardware fault.

Closer inspection found the supervisor attempting to load the system via the CPU Load button

(perfectly normal practice).
What had been overlooked, and was quickly pointed out, was that the system had recently been up-graded and repositioned (this included a new processor of similar appearance) and that the old processor was still in the computer room. The supervisor's finger was

ibv Philip Hunter

I'M sure most of you have at some time operated a reasonably sophis-ticated computer graphics unit, and probably enjoyed the experience. I refer, of course, to the ubiquitous space invader machine. The pleasure of wreaking terrible destruction on invading aliens is only tempered by the expense as you cram in large amounts of loose change in the public bar of the Dog and Bucker

But there are operators who have the dubious privilege of firing real missiles at real hostile craft, without the inconvenience of havng to put 10p pieces into the slot. The Admiralty Surface

with Software Sciences (part of the erstwhile BOC computer services division, and now part of Thorn-EMI), has been working on the future command and control (C2) ystems for the Royal Navy since 1978, and has now come up with what it is confident is a major step forward in both increased perormance and resilience.

Conventional C2 systems are

BABEL BOXES FROM PINK. Pink BURROUGHS PROTOCOL CONVERTOR

case of enemy attack, or mechanical failure; the demands placed on the machine during an attack can often cause severe overloads.

The reasons behind the single machine approach are simple; at the systems were designed, processing power was exrelatively large boxes. Thus the possible locations for such a device on board a warship, where space is at a premium, are strictly limited.

Such a system is known as an action information organisation, and all information from sensors such as radar and sonar, and weapon system control (much of which is in analogue format) is co-ordinated from the central operations room, which contains most of the processing power of the

But now that smaller, cheaper and more powerful computers are available, the opportunity has arisen for the Navy to provide a more comprehensive and resilient system, incorporating hardware and software innovations, net-working and database techniques.

The solution produced by ASWE and SSL is known as distributed information architecture for ships (DIAS), and is based around the military version of the Ferranti Argus 700 mini, the Argus M700/20, which, although sup-posedly identical from the user viewpoint, has a different instruc-

The first issue of a new academic journal, Behaviour and In-

WERE I to describe Sara Pearce, who works for CAP Reading, as the world's first Ada programmer, it would be a distortion of the truth. But she is certainly the first purpose-built applications Ada Programmer I know of.

Until recently, the US military language Ada has been kept under the wars of its makers.

These include a small robot arm control system, and an airline reservation system.

One of Ada's strongest features is its multi-tasking facility, which allows several processes to go on at once with exchange of information between them when necessary.

These include a small robot arm control system, and an airline reservation system.

One of Ada's strongest features is its multi-tasking facility, which allows several processes to go on at once with exchange of information between them when necessary.

These include a small robot arm control system, and an airline reservation system.

Pearce, 22, joined CAP fresh from Swanses University in September and took the hard way to wisdom with Ada — from a reference manual. But she was able to

keting this, and it is Pearce's job to

by arguing that mere menu

selection is too narrow a channel of

communication and that textual

input should be considered.

He cites four main types of

problem in matching text inputs

● Inability to cope with spelling

viations, alternative spellings and

with a computer dictionary:

formation Technology, contains a paper by Martin Maguire of Leicester University which Leicester University which

demonstrates this par excellence – the bookings can be fed in while updates are performed.

nout is not recognised.

Maguire goes on to describe a method called TEX, which is an

attempt to tackle these four input

recognition problems.
TEX begins by splitting input into individual words and looks

them up in a dictionary. Minimal

abbreviations, usually three char-

acters, are allowed, and designed

ity.
While the matching takes place,

The robot can be manipulated directly from the keyboard and at the same time the system can practise the principles on a memorise the sequence of moveworkstation dedicated to Ada and ments. So here again the multi-Pascal after a couple of months, tasking facilities of Ada are ex-and now flexes an enviable ploited in a "teach and learn" fluency.

Also important is that trout exincluded 40 in a new category of special schools for handicapped children. crete ammonia, which is poisonous to them. Hence they naturally flourish in fast-flowing treams Ten of the schools were singled which maintain water of pristine purity. In the pond a bed of gravel impregnated with bacteria which break down the ammonia into nitrates, is used to filter the water. I was not deemed possible to contro interactively the ammonia level

> nitor it.
>
> If the level rises too high, a tele phone alarm is triggered. This action is also taken when someone tries his hand at a little poaching

but the computer was used to me

The pupils were not slow to miss a fertile corollary of their work. The nitrates produced when bacteria break down the waste ammonis encourage plant growth. So the gravel beds containing these bacteria could be placed in a greenhouse

away from the trout farm.
Water from the farm is then piped into the greenhouse and flushed through the gravel beds to remove the pernicious ammonis and leave a residue of benevolent nitrates for the plants. The computemperature of the greenhouse, the chemical composition of the water and the response of different

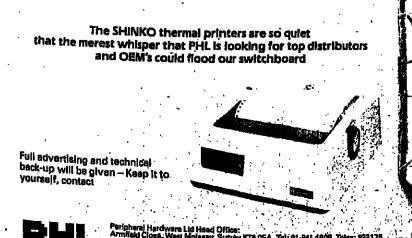

plants to this regime.

A microcomputer software competition for primary and secondary schools with prizes totalling £1,750 has been anounced by Transam Computers and Hut-chinson Education. Closing date is July 1, and full details are available from Prime Programs, 17 Conway Street, London W1P 6JD.

SALARY STRUCTURES

Report by Andrew Thomas

'Most sites are understaffed by up to 11%'

With a projected 20% increase in the requirement for programmers over the next five years,

Salaries form one of the most significant aspects of data proces-sing budgets — in just over half of by personnel costs. Only a fifth had 25% or less of their costs directly or indirectly attributable

to personnel.

Table 1 shows average salaries at the end of 1981 for the 18 major of the installations surveyed. As an example the average salary paid to DP managers is £11,670, but 20% were paid less than £9,000, and the

The variations are due to many factors, including size of installation, number of staff employed, and geographical location. Table 6 shows those respondents whose returns showed significant deviation (±5%) from the national average for the 14 job categories covering

by region, type of industry and total DP staff employed. It can be seen that London salarics are considerably higher for all job types, and that larger departments tend to pay better, except the state of accumulating this data.

It is noticeable that the generally better pay in the public sector is

programmers employed than was the case 12 months ago yet 8% of ployees in the public sector substantially poorer than the national average, and in the case of the more senior posts and operations staff they are consistently

> Overall, the most poorly-paid industry groups are the engineering, business and financial services areas. DP managers and greatest salary range, and velopment staff the smallest.

The salary trends for 1981 reflect what actually happened, and show a roughly average 9½% rise.
Estimates for the rise this year may well have been depressed by the response to public sector pay guidelines, resulting in Table 4 showing a remarkable proclivity

rowards increases close to 7%. Bu expect to award smaller increases than last year.
On holiday entitlement, all job categories fell within the four or five week area, with the senior

staff having more time off, as might be expected. Again, larger installations scored higher in the holidays league.
One of the most significant aspects of remuneration packages is

perks. Ranging from company cars to subsidised meals, they provided an extra 10% across all job categories. The actual value of perks shown in Table 5 was estimated by the respondents themselves as there is no other sensible method

partly counter-balanced by signifi-cantly less advantage from perks. The overall value of perks to a DP manager in the public sector is £500 on top of a £12,545 salary, while his or her counterpart in the engineering industry can expect £1,670 in addition to a basic wage

of perks in augmenting salaries. While the public sector DP manager appears to receive 71/2% more than the national average, with perks taken into account, the gross salary falls to 11/2% below the aver-

In the engineering industry, DP managers are typically 16% below are taken into consideration, the shortfall reduces to only 7%. As a national average, Dl' managers' perks add 14% to the value of their

game at Data General what organisational theorists blue-eyed boys of the official re-would describe as a "power cul- search team assigned to take the search team assigned to take the company into the 32-bit minicomture", wherein managers ruthlesscompete for resources and puter market and Tom West's unwhose peers are tolerant of means derstaffed and under-resourced research team unobtrusively tucked The central character is an engiaway in the basement of the com-

neer called Tom West -superstar, genius, Machiavellian prince and family man rolled into What Kidder has achieved is a one. West motivates by creating story which makes things like crises. His subordinates, freshmicrocoding, simulation and defaced graduates, despise him for bugging interesting and accessible to the layman. "The way I got interested in microcoding is by the way he treats them - never greeting them in the corridor, never patting them on the back for doing a good job, and so on. But they know that their colleagues at IBM would take years to get to getting interested in the microcod-ers," he explained. He is a quiet unassuming character and looks somewhat uneasy about his sudden work on projects of the same imelevation into the limelight. portance. Some drop out but most The Soul of a New Machine has of them realise they are on to a ound a wide readership outside good thing if they can "get their name on" a new machine which

pany's headquarters

the US in countries like Japan, Germany, Holland and France, actually makes it out of the factory and of course in the UK. And film maker Columbia has taken an op-tion on it for one year with the Impossible deadlines are set to get a machine built, and Kidder right to renew for another year. vividly describes the political power struggles taking place within Data General between the

Boris Sedacça

Overtaken by events

Electronic Mail Systems - A Practical Evaluation Guide. J. A. Welsh and P. A. Wilson, NCC Publications, 130pp.

FOR readers keen to discover what electronic mail is all about this is not the book. But for those 'already, or just about to be involved, it comes in the desirable

buy category.

As can be expected of an NCC project team, it establishes standards and procedures involved in EM operations.

The book covers such matters as ergonomic design, documentation nanagement, security and invitably, archives.

But the list of EM suppliers suf-fers the fate of most books cover-ing office technology, that of being out-of-date one hour after compi tion. Missing from the NCC chart are such notable EM suppliers as 3T, Digital and Hewlett-Packard.

This book is the first in a series of NCC evaluation guides covering office technology in the Eighties. The project certainly looks like being a worthwhile, if exhaustive,

Alan Simpson

Good news for UCSD early sufferers

Kochler. Prentice-Hall, New

The Soul of a New Machine, by Tracy Kidder. Published by Al-len Lane, price £7.50.

THE way to learn about some-

thing complex is to observe the people involved in it. This is what Tracy Kidder has

done in his staggeringly successful

garded as a dry and complex

Kidder has done something no

other author has done before; he has penetrated an innermost sanc-

tum of the second largest

minicomputer manufacturer in the world with the express purpose of

writing a book on it. Kidder has been a journalist for

ten years and works as a freelance

writer for Atlantic Monthly. Two

year ago his editor told him to look

into computers.
The outcome was The Soul of a

New Machine, a story which blows

a great big hole in the myth that

the job of a computer engineer is

dull and highly structured - in the

case of Data General, that is.

Jersey. \$15.95. THE UCSD system is widely known and used on over a dozen computer architectures. If offers a number of languages including a version of Pascal and Ansi-77 For-tran (subset standard) embedded in a fairly sophisticated operating Considering its importance for microcomputer users it is surprising that there is not more introductory documentation avail-

The early versions of the UCSD manuals were not well written and were difficult to follow. For those who suffered earlier this book is a

The first part of the text deals with Pascal as implemented on the UCSD system. This has a number of useful extensions over the lan-guage described by Jensen and Wirth. The version of the UCSD system itself which is discussed throughout is version IV but some reference is made to earlier re-

The UCSD Pascal Handbook.
Randy Clark and Stephen ence guide to Pascal in this specific

Penetrating the power

as long as the job gets done.

It is far from being an introduc tion for the novice as the language is not presented in a tutorial fashion. It appears to be aimed at the fairly experienced programmer in another language converting to Pascal or the user of a different implementation of the language converting to the UCSD system.

The second part of the book is devoted to a large number of programming examples. These range from the fairly elementary to the sort of "dirty tricks" necessary for system programmers to circumvent the strong typing of Pascal or

do bit manipulations.

The book is well-suited to its intended audience which seems to be experienced programmers with serious applications or systems programming projects in mind. It cannot substitute for the detailed technical documentation but provides useful material to start from

John Cookson

0930 Cha

0945 The t

tion — Tools and Techniques for Effective Analysis. Michael F. Morris and Paul F. Roth. Van Nostrand Reinhold Data

Processing Series. FOR a number of reasons computer performance evaluation is reas of applied computer science its aim is to measure accurately locument and report the way com puter systems perform under various loading conditions. To do

this effectively, many different techniques are needed. This book covers most of the important ones since it has sections devoted to the analysis of accounting statistics, benchmarking imulation, hardware/software mo

nitors and modelling.

The text is simed at computer management who are likely to feel uneasy when dealing with advanced mathematical symbolism. It would make a useful introduc

tion for those looking for a new comer's way in to computer per formance evaluation, but would be of less value to those who have some experience of this field.

ABU DHABI NATIONAL OIL COMPANY

OPPORTUNITIES AVAILABLE FOR COMPUTER PROFESSIONALS

ADNOC is one of the major oil companies in the Middle East controlling the Exploration, Production and Distribution of Oil, Gas and Associated products in Abu Dhabi. We are providing Data Processing facilities under TP and Database environments to our Group of companies, with a wide communications Network and a number of mainframes. We require a wide range of suitably qualified and experienced DP staff in the areas of Petroleum Engineering and Commercial applications.

1. APPLICATION DEVELOPMENT **AND SUPPORT**

- SENIOR SYSTEM ANALYSTS
- → DATABASE ADMINISTRATORS - ANALYST/PROGRAMMERS & **PROGRAMMERS**

The candidates should have a university degree and 3 to 8 years' experience in one of the SYSTEM ANALYSIS, DESIGN and PROGRAMMING (COBOL/FORTRAN), PLANNING, QUALITY ASSURANCE, IOMS DATABASE and TP SYSTEMS. Some positions also require experience in Geological Databases, Contouring or Reservoir Modelling. A degree in Science or Engineering is required for these positions.

2. SYSTEM SUPPORT

- DATABASE SUPERVISOR
- SYSTEM ENGINEERS

The candidates should have a university degree and 3 to 8 years' experience in one of the following activities: ICL VME/B AND IOMS Support, IBM DOS/VSE Support, COMMUNICATION INTERFACES and PROTOCOLS, NETWORK MANAGEMENT and PERFORMANCE ANALYSIS.

3. OPERATIONS

- SHIFT LEADERS
- SENIOR OPERATORS & OPERATORS - PRODUCTION CONTROLLERS

The candidates should have adequate education and sound operational knowledge on large ICL and IBM mainframe operations.

ADNOC benefits include a high tax-free remuneration, good career prospects, free medical care, free furnished family accommodation, paid home leave for the family and educational assistance.

Knowledge of Arabic for all positions will be an advantage.

interested condidates are invited to forward their detailed applications, together with photocopies of their education and experience cartificates, within two weeks from the date hereof to:

PERSONNEL DIRECTORATE — EMPLOYMENT DIVISION ABU DHABI NATIONAL OIL COMPANY — (ADNOC) P.O. BOX 898 — ABU DHABI — U.A.E.

DATA PROCESSING

Applications are invited for the newly-created position of Data Processing Manager in the University Registry to take charge of the administrative processing function in the University.

Within the guidelines laid down by a Systems Committee, the successful applicant will accept overall responsibility for the total administration of the successful applicant seconds. administrative data processing operation, which currently includes student records, ledger, and payroll as its main aspects, and will initially be responsible directly to the Registrat

registrar, it is expected that applicants will be experienced in systems a naiyals and in the management of a data processing group, particularly in the areas of project control and in the development of attandards. A proven work record in these fields will take precedence over formal system you will feet and standards.

The position carries the grading of Assistant Registrar. The salary will be within the scale NZ\$23,305\$29,792 per annum. For a particularly well-qualified applicant, an appointment in the scale NZ\$30,621\$32,335 would be considered.

Further particulars including method of application are available from the: Association of Commonwealth Universities (Appts.), 36 Gordon Square, London WC1H OPF, or from the Registrar of the University, P.O. Box 56, Dunedin, New Zaaland, Applications close on 30 April, 1982. (8880)

LEAD PROGRAMMER

IBM PL1 Applicants with at least 2 years' PL1 are required for this site based West of London. The post could be considered as a first management move since it would involve direct control of three people. The client is an advanced data-base user as well as an Assembler user and is prepared to give training in both.
As well as an excellent starting salary the job carries standard large company benefits including 25 days' annual leave.

PROGRAMMERS HP COBOL

to £10,000

Senior and junior programmers are required by sites in C. London and the Home Counties. Applicants should have 1-4 years' experience including some exposure to HP systems. These positions are with progressive companies and include an expanding City-based bank and a manufacturar based West of London. Perks are varied and include mortgage subsidy, travel allowances persents.

PROGRAMMER ICL COBOL

Expanding City-based installation seeks a programmer with about 2 years' COBOL experience gained on the ICL 2900 range. The preferred applicant will have both on-line and database experience with a good commercial background. The company is shortly installing new hardware and can offer excellent career prospects and perks including a substantial bouls schame.

PROGRAMMERS

Two London-based software houses have requirements for NCR programmers. One client seeks a programmer with around three years' NEAT 3 experience, the other requires a minimum of two years' NCR COBOL including knowledge of IMOS. Applications to be worked on will be mainly financial but any good commercial experience will be acceptable.

PROGRAMMER

Two IBM SYS 38 sites based close to London have requirements for programmers with good overall SYS 94 or possibly SYS 38 experience. Both sites have recently installed the 38s and most of the work entailed is development. Applicants should have a minimum of 1½ years' RPGII within a SYS 34 environment. Any exposure to systems would be of interest as early appropriate through its application of the programmer is applicabled. early promotion through to analyst/programmer is envisaged.

SENIOR PROGRAMMER

BASIC+/+2 At least two years' BASIC+ with some BASIC+2 is required by a large City user. As well as programming ability applicants must be able to manage junior staff. All programmers are encouraged to gain early involvement with analysis since there are no analyst/programmers.

£9.500

c. £8.500 SENIOR PROGRAMMER HONEYWELL

Installation based West of London is seeking a senior programmer to lead a team of two programmers. Supervisory experience is desired as management and systems lieison is involved. Perks include company product discount and other

ANALYSTS & PROGRAMMERS to £10,000 **DATA GENERAL**

A well-known company within a large group of companies are currently expanding their computing facilities and require programmers and analysts who have a minimum of two years' grammers and analysts who have a minimum of two years' commercial experience utilising COBOL with sound knowledge of NOVA and ECLIPSE systems. A wide range of applications are under development and career prospects can be considered excellent.

SYSTEMS ANALYST

Manufacturing concern is currently seeking to develop its analytical capability to recruiting a systems analyst. Candidates should possess a strong financial or manufacturing background to include four years' DP experience. A Honeywell background would be useful however not essential.

OPERATIONS

IBM DOS/VSE SHIFT LDR. c. £8,000 Company South of London seeks min. two years' experience with knowledge of POWER/VS, SPACEMANAGER, EPAT, SEL-

to £8,500 IBM VM, OS/VS1 OPS South London installation requires experienced operators. VM, OS/VS1, MVS experience plus IMS and MTO useful.

c. £6.500 IBM DOS/VSE OPERATOR North West London company seeks Operator with around two years' DOS/VSE experience.

c. £7,000 PDP11 RSTS/E OPERATOR Two years' experience of RSTS/E is required S. London.

c. £7,000 ICL 2900/DME SEN. OP. C. London site working two shifts seeks two year Chance to learn new hardware. Exc. benefits.

Apex Computer Recruitment Ltd 59 Grays Inn Road, London WC1X 8TL

The existing CAD team at Burroughs European Development centre is ready to expand to meet the challenge of the latest advances in technology.

We require highly motivated individuals, possessing at least one year's relevant experience, to assist in the extension of our LSI D.A. system CELTIC which has already been used to design polycell LSI's in advanced

Engineers are required for development and support in the following areas: Design Capture and High Level Design Tools

Graphics capture of designs. Logic simulation. Hardware description

Block Layout of VLSI

Automatic and interactive placement and routing.

Timing analysis of VLSI.

We offer attractive salaries and excellent conditions of employment to men and women at our beautiful rural location in the central lowlands of

Burroughs

experience within one or more of Enator's main client sectors. Enator's organisation is very different from those environments you have been used to. We place emphasis on personal development — each person has the possibility to influence their own work and take on responsibility. As most of us work with clients in small groups, we stress the importance of personal meetings and leisure activities in order to increase personal skills and change the Enator state.

PUZZLE ANSWER I

snhance the Enator spirit. If you find this post interesting, please send your application, including CV and expected salary to: Enator (U.K.) Limited, Ibex House, 61-65 Baker Street, Weybridge, Surrey. Tel: 0932 46192. enator
